

Ankit Ranjan

Senior Mobile Engineer | Flutter · Kotlin · Swift

7+ Years Building Cross-Platform FinTech, InsurTech & IoT Apps · Contributor to the Dart SDK (dart-lang/sdk)

ankitrانjan.dev@gmail.com | +91-783-842-6911 | linkedin.com/in/ankit-ranjan-a874b6101 | ankitranjan.dev

PROFESSIONAL SUMMARY

Senior mobile engineer with 7+ years shipping production Flutter, Android (Kotlin), and iOS (Swift) apps for FinTech and InsurTech products serving tens of thousands of users. Specializes in Clean Architecture and BLoC, native platform-channel integrations, and mobile performance and security — cutting policy-activation failures from 67% to under 5% at PasarPolis and delivering 90%+ test-covered loan products at Kuhoo. Contributes to the official Dart SDK (dart-lang/sdk) at the FFI and ABI layer, bringing language-level depth most Flutter engineers never reach. Trusted to ship under pressure and own delivery end-to-end — from Figma to production — across a full PWA for 50,000 launch users, a custom BLE IoT platform, and complete feature suites built from scratch.

TECHNICAL SKILLS

Languages: Dart, Kotlin, Swift, Java, JavaScript/TypeScript, SQL

Flutter & Dart: Flutter SDK, custom widgets, BLoC, Cubit, Riverpod, Provider, platform channels (MethodChannel, EventChannel), native plugin development, BLE & IoT integration, isolates, async/streams, Flutter Web/PWA, DevTools profiling & memory-leak detection, Rive, WebView/JS channels, i18n (Intl, RTL)

Native Android: Jetpack Compose, ViewModel, LiveData, Room, WorkManager, Coroutines, Flows, Hilt/Dagger, Material 3, ProGuard, Play Store release

Native iOS: SwiftUI, UIKit, Combine, Swift Concurrency, Core Data, Core Bluetooth, HealthKit, Keychain, XCTest, CocoaPods, SPM, App Store Connect, TestFlight

Architecture & Quality: Clean Architecture, MVVM, MVC, BLoC, SOLID, modularization, TDD, BDD, GoF patterns, DSA, HLD/LLD, unit/widget/integration testing (90%+ coverage)

Backend, APIs & Firebase: REST, GraphQL, WebSockets, Node.js, microservices, Firestore, Cloud Functions, FCM, Analytics, Crashlytics, Remote Config, App Distribution

Security: AES-256, biometric authentication, SSL/certificate pinning, secure local storage, Secure Enclave/Keychain, OWASP Mobile Top 10

CI/CD, Cloud & ML: GitHub Actions, Fastlane, Gradle, Git; AWS (EC2, S3, CloudFront, Amplify, Elemental MediaLive); TensorFlow Lite, ONNX Runtime, MobileNet, on-device NLP

Design & AI Tooling: Figma (design-to-UI), Rive, Claude Code, AI-assisted development

PROFESSIONAL EXPERIENCE

Consultant — Senior Mobile Developer

Feb 2024 – Present

uBreathe · PasarPolis

Flutter, Dart, Kotlin, Swift, BLE, Firebase

- Architected a custom Flutter plugin over MethodChannel and EventChannel to stream live BLE telemetry from IoT air-purifier hardware — eliminating polling and delivering real-time device metrics with zero UI jank
- Owned concurrent feature delivery and crash triage across the PasarPolis insurance suite in Flutter, native Android (Kotlin), and native iOS (Swift) — resolving platform-specific crashes and optimizing render performance across all three codebases
- Hardened both platforms to mobile-security standards — SSL certificate pinning, biometric authentication, and AES-256 encrypted local storage — meeting app-store and partner compliance requirements

Senior Software Engineer

Mar 2023 – Feb 2024

Kuhoo — FinTech

Flutter, Dart, Clean Architecture, BLoC, Firebase, CI/CD

- Designed and shipped a suite of loan products (personal, education, top-up) on Clean Architecture with strict domain, data, and presentation separation — reaching 90%+ test coverage and owning HLDs, LLDs, and UX specs for every feature
- Standardized BLoC event and state contracts across 4 product lines, cutting cross-team integration defects by 60% and unlocking parallel feature development across squads
- Instrumented Firebase Analytics and Crashlytics funnels to isolate a checkout drop-off, reducing loan-application abandonment by 18%
- Built a BDD automation framework from scratch, collapsing regression time for complex loan flows from 2 days to 4 hours
- Established a GitHub Actions and Firebase App Distribution CI/CD pipeline, moving releases from weekly manual builds to daily automated deployments

Software Engineer

Jan 2020 – Feb 2023

PasarPolis — InsurTech

Flutter, Flutter Web/PWA, Kotlin, Swift, Firebase

- Slashed policy-activation failure rate from 67% to under 5% and quadrupled activation speed by redesigning the async activation queue with retry logic and idempotent API handling — recovering an estimated 15%+ of previously lost activations

- Delivered the Tap Insure PWA from zero to production in 3 weeks for 50,000+ launch users — bridging browser-native camera, GPS, and push APIs into the Flutter WebView via JavaScript channels inside native WebKit shells, avoiding two separate native submissions
- Built custom MethodChannel plugins in Swift and Kotlin to integrate Apple HealthKit and Google Fit — enabling 2 new health-linked insurance products with zero third-party SDK dependency
- Engineered runtime-configurable insurance claim forms that render partner-specific field schemas from JSON — collapsing partner onboarding from 3 weeks of app development to a single config file and supporting 8 new partners
- Migrated the Employee Benefit App from setState to BLoC in 6 weeks, reducing UI state bugs by approximately 40% and enabling full widget-test coverage for the first time
- Designed a QR-stabilization algorithm and integrated a MobileNet model for document scanning, cutting invalid-scan errors by 35% in low-light and off-angle conditions

Software Engineer

Jan 2019 – Nov 2019

Ameyo — Enterprise Software

Android (Java), iOS (Swift)

- Led end-to-end design, development, and QA of the iOS Supervisor app across 4 sprints — shipping with zero P1 or P2 production bugs in the first 60 days
- Shipped a callback-management mobile SDK to 6 enterprise clients with a clean public API, versioned releases, and full integration documentation

OPEN SOURCE CONTRIBUTIONS

dart-lang/sdk — Official Dart Programming Language SDK

Contributor

- Migrated legacy Native Interop (FFI) test configurations (#60212) by refactoring multi-test files in the `vm/ffi` suite for compatibility with the modern Dart SDK test-runner pipeline
- Implemented `dart_api_dl.h` expect tests (#51467), verifying C-API layout consistency for Dart native extensions and strengthening VM runtime and API stability

dart_abi_poc — Dart FFI & ABI Verification Toolkit

Creator & Maintainer

- Built a proof-of-concept harness that validates ABI structures and type-matching logic across Dart FFI borders, with cross-platform native layout checks that surface runtime misalignments and memory faults before compilation

INDEPENDENT PROJECTS

Gulf Racing — Live Streaming App (*Freelance*)

2022–2023

Flutter, AWS Elemental MediaLive, EC2, S3, CloudFront, Amplify

- Cut glass-to-glass streaming latency from 25 seconds to 3 seconds at 720p (88% reduction) using AWS Elemental MediaLive with low-latency HLS segmentation
- Architected a bilingual Arabic/English app with full RTL and locale-aware UI (Flutter Intl, Figma-to-Flutter pipeline) on scalable AWS infrastructure — EC2 origins, S3 with CloudFront CDN, load balancing, and Amplify — supporting concurrent race-day viewers

Close Brothers — Vehicle Hire Logistics App (*Freelance*)

2021–2022

Flutter, Clean Architecture, TDD, Firebase, Hive (AES-256)

- Delivered a responsive tablet and mobile app with dark mode on Clean Architecture and TDD, reaching full widget and integration coverage; built offline-first AES-256 encrypted Hive storage plus Firebase Dynamic Links, Remote Config, and Crashlytics for monitoring

Financy — Privacy-First AI Expense Tracker (*Personal*)

2024

Flutter, ONNX Runtime, TensorFlow Lite, SQLite, AES-256, On-device NLP

- Architected a 100% offline expense tracker with on-device ML inference (ONNX Runtime) running under 20ms for 90% of transactions — zero cloud dependency or data exposure
- Built Gmail and SMS sync with on-device NLP to auto-extract and categorize expenses, cutting manual entry by an estimated 80% in testing, behind biometric authentication and AES-256 local encryption

EDUCATION & PUBLICATION

B.Tech, Computer Science — A.P.J. Abdul Kalam Technical University (AKTU)

Apr 2019

Automation in Agriculture and IoT — IEEE, 23 citations

ieeexplore.ieee.org/document/8777619

CERTIFICATIONS & AWARDS

Certifications: Figma Masterclass (Designership, 2025) · Design Thinking & UX Foundations (IxDF, 2024) · Flutter App Development (London App Brewery, Udemy)

Awards: Employee of the Month — PasarPolis · Multiple performance awards — Kuhoo · Competent Communicator — Toastmasters International
